

WELL SERVICING

**Powered by innovation, driven
by efficiency and rooted in
decades of global experience.**

**WE DELIVER WHAT
THE WELL NEEDS.**

ENSIGN[®]

A low-angle photograph of a worker in a white hard hat, safety glasses, and a heavy-duty work jacket. The worker is wearing orange and black safety gloves and is holding a large, vertical metal rod or pipe. The background shows industrial machinery, including a large chain and a circular component. The image is split diagonally, with the top-left portion being red and the bottom-right portion being blue.

**In business for more than
three decades, Ensign offers
the stability and resiliency to
guarantee that if we start a job,
we'll be around to finish it.**

As industry and customers change, so do we. We pride ourselves in having state-of-the-art, modernized equipment including our single, double and heavy double series of rigs. Our team is committed to constantly improving and customizing the functionality of our fleet. We work where our customers need us, with the capabilities to work anywhere across the United States. We combine science, safety, innovative technology and engineering to deliver stellar performance in oil, gas and thermal well servicing.

**We get there first.
We get there fast.**

The right team for the job

Our crews are highly trained and have experience working in the most challenging well servicing conditions. We work hard and smart, providing our customers with dependable world-class oilfield services and results. We are adaptable and flexible, with specialized equipment to meet regional demands.

Training

At Ensign, we're proud our people meet rigorous skill and safety standards; standards that provide our customers with a consistent level of service on all of their projects. We know that when our crews mobilize, our people are capable, experienced and ready to excel. Ensign believes quality training for our people means quality service for our customers.

This approach to customer service is rooted in Ensign's enterprise-wide Global Skills Standard (GSS). GSS is an approach to training that uses a

standardized curriculum to ensure and guarantee Ensign's people (specifically, rig crew) around the world, meet our global criteria for skills and competency, enabling us to provide a consistently high level of service in all our operations.

Our customers deserve the assurance that Ensign meets benchmark standards of performance, regardless of the size or location of an operation.

Health, Safety and Environment (HSE)

At Ensign, we're striving for a perfect Health, Safety and Environment (HSE) record.

In our industry, there's no compromise on health and safety and Ensign is never complacent about safety performance. We believe all incidents are preventable. That's why we train our employees in a high-performance safety culture and are continuously Driving to Zero®.

Zero safety incidents. Zero injuries. Zero absences due to injury.

Training starts on the first day of employment and is continuously reinforced through rigorous job safety analysis practices, personal injury prevention training, safety coaching, pre-job safety meetings and work observation and intervention programs.

Ensign's commitment to safety is evident with the development of our proprietary, fit-for-purpose software platform, Global Risk Management System (GRMS) that automates our HSE reporting. GRMS provides a complete suite of HSE reporting tools to ensure that every rig, field worker, office employee and office in Ensign's global workplace is engaged and actively supports a high-performance safety culture.
